"Sustainability Recommendations"

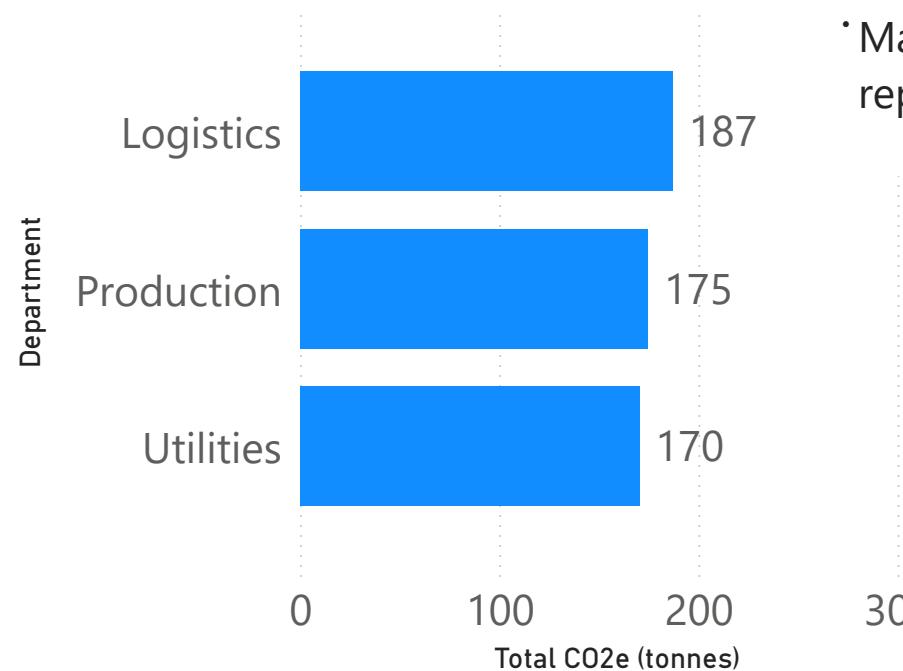

- Prioritize electrification and route optimization within logistics to reduce fuel based emissions.
- Introduce energy efficient programs in Production and Utilities departments
- Implement Scope 3 tracking beyond operational boundaries (e.g., supplier and waste impacts).
- Maintain monthly monitoring and reporting for trend analysis

Top Emitting Departments

"Logistics is the top emitter, accounting for 35% of total CO2e emissions (187.01 tCO2e). Production follows with 33%, while Utilities contributes 32%. These three departments jointly account for the organization's total carbon footprint."
